# Andrej Karpathy spent *years* building OpenAI.

This week he said he barely uses AI to write code anymore.

# He uses it to *organize* knowledge.

Drop every research note, transcript, paper, and idea into a folder. Point a model at it. Get back an interlinked wiki, with backlinks, categorization, and ongoing updates as new material drops in.

# Sound *familiar?*

If you run a small business, this isn't new. You already have the raw material. **It's just scattered.**

# Where your knowledge lives right now.

01 Estimates in Dropbox.

02 Customer notes on a clipboard.

03 Job history in your lead tech's head.

04 Compliance docs in three Google Drives.

05 None of it talks to each other.

# The pattern isn't "add AI to your stack."

It's *consolidate* the knowledge first. Then let an AI use it.

# Built one for *myself* in March.

**192 documents.** Every client conversation, every project decision, every research thread. Searchable in milliseconds. Cross-domain questions answered out loud.

VaughtAI

# When a fab owner asks why their quoting takes an hour, I don't *guess.*

I pull the answer from a graph that already knows the **shape of that business.**
